

Pfizer 12+ Years – Vaccine Shelf Life Extension

Dear COVID-19 Vaccination Partner

The Therapeutic Goods Administration (TGA) has approved a shelf-life extension of **Pfizer 12 years+ (Purple)**, provided that approved storage conditions between -90°C to -60°C have been maintained.

The shelf-life extension applies to the following batch numbers:

Batch Number	Labelled Expiry Date	New Expiry Date
FL3560	28-February-2022	31-May-2022
FH3221	28-February-2022	31-May-2022
FL7649	28-February-2022	31-May-2022
FL5729	28-February-2022	31-May-2022
FK6268	28-February-2022	31-May-2022
FL5333	28-February-2022	31-May-2022
FK0892	28-February-2022	31-May-2022
210957	28-February-2022	31-May-2022

Please be aware that the packaging associated with the above batches has not been amended to reflect the extended expiry dates. If you have received any of these batches frozen, please update the expiry date on the vials to reflect the new expiry dates.

Thawed deliveries will continue to have the defrost date noted on the packaging. Individual vials will not be relabelled with the extended expiry dates. Make sure you continue to use any thawed vaccine prior to the defrost expiry date.

Please reference the above table when receiving Pfizer 12+ years (Purple) vaccine for the correct expiry date. The new expiry date of each batch will also be reflected in CVAS when completing delivery acceptance.

We are grateful for your continued support in facilitating the safe and effective administration of COVID-19 vaccines.

Kind Regards,
Department of Health Vaccine Operations Centre (VOC)
